

ARTIFICIAL INTELLIGENCE & AUTOMATION PRACTITIONER LEVEL 4

Build smarter workflows with AI and automation.

This programme gives learners the practical knowledge and confidence to improve how work is completed using AI, automation and digital tools. Through a workplace improvement project, learners will analyse existing processes, identify opportunities, evaluate and build suitable solutions, support implementation and measure the impact delivered. Responsible AI, data protection, cyber security, accessibility and human oversight are embedded throughout, ensuring solutions are safe, ethical and aligned with organisational needs. This apprenticeship is suitable for employees in operational, administrative, digital, project, improvement or customer-facing roles who help improve processes, reduce manual work, or support digital change. No software development experience is required, but learners should be able to analyse data, workflows and apply AI automations in their role.

We launch new apprenticeship cohorts every quarter, providing regular opportunities for enrolment and progression – contact us at training@clearquality.co.uk or call 01709 918501.

What Will I Learn?

- ✓ Identify valuable automation opportunities
- ✓ Design responsible digital workflows
- ✓ Build and integrate AI solutions
- ✓ Test, implement and measure impact

What Skills Will I Gain?

- ✓ Process mapping and problem-solving
- ✓ AI prompting and output evaluation
- ✓ Low code and no code automation
- ✓ Stakeholder communication and change support
- ✓ Testing, troubleshooting and impact reporting

Duration and Cost
